**Robert Cantwell, III**

RE: Request to Adopt Changes to Clayton’s Local Law/Wind Ordinance

I believe that a renewable wind energy plan in the Town of Clayton must not endanger our four most important non-renewables; our families, our homes, our community, our land.

I believe that any renewable energy plan must preserve the health and safety of all members of our community. I ask that the town council adopt immediately each of the following requests for change to the Town’s present wind ordinance:

1. To protect residents from turbine noise, the local wind ordinance noise level not exceed a reading of an increase level of no more than 5 dBA above ambient established at the residents property line. This recommendation is consistent with guidelines established by the New York State DEC.
2. To protect residents from shadow flicker and other concerns that industrial wind turbines up to 500 ft tall not be located (setbacks) any closer than 2600 ft from a resident’s property line.
3. To offer wind development and protect all residents from safety impacts from the industrial turbines request the town planning board adopt a new and larger wind district location that provide opening up the entire township for safe placement of industrial wind turbines.

Taxpayers in the town of Clayton need a responsible wind energy development plan that first protects all taxpayers and still offers the town the availability of a sound and responsible wind development plan.

Respectfully yours,
